TARGET USER

IT Admin / Requisitioner

MAXIMUM MARKS

4 Marks

WHAT DOES HE/SHE THINK AND FEEL?

"Will the laptop arrive before the employee's Day 1 onboarding?"

Worried about manual approval backlogs and lost procurement requests.

Desires an automated, transparent request workflow with instant updates.

WHAT DOES HE/SHE SEE?

Multiple unorganized email threads for single hardware approvals.

Legacy portals with no real-time status tracking or automated triggers.

Managers repeatedly asking for manual updates on order dispatches.

WHAT DOES HE/SHE HEAR?

"Why does hardware allocation take 3 weeks instead of a few days?"

Vendor support: "We are still awaiting manual finance signatures."

Peers complaining about complex, redundant hardware order forms.

WHAT DOES HE/SHE SAY AND DO?

Submits hardware tickets manually and sends constant follow-up emails.

Says: "I need a standardized laptop pre-configured and shipped fast."

Manually tracks inventory across separate spreadsheets.

PAIN (FEARS, FRUSTRATIONS, OBSTACLES)

Manual Bottlenecks: Multi-layer manual approvals causing deployment delays.

Lack of Visibility: No centralized status tracking across departments.

Human Error: Incorrect hardware specs and delivery details entered manually.

GAIN (WANTS, NEEDS, SUCCESS MEASURES)

Flow Designer Automation: Instant trigger-based routing and auto-approvals.

Real-time Tracking: End-to-end visibility for both requisitioner and IT team.

Standardized Catalog: Error-free hardware selection and automated catalog sync.
