PROJECT NAME	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer		

Proposed Solution Template: Project team shall fill the following information in the proposed solution template.

S.NO.	PARAMETER	DESCRIPTION
1.	Problem Statement (Problem to be solved)	IT procurement teams face severe operational bottlenecks due to manual laptop order processing, multi-tier email approvals, and decentralized inventory tracking. This causes extended fulfillment delays (10+ business days), high error rates during manual data entry into fulfillment systems, poor visibility for hiring managers, and productivity loss for new employees awaiting essential hardware on day one.
2.	Idea / Solution description	An automated workflow solution built on ServiceNow Flow Designer that standardizes and automates laptop ordering from request to delivery. • Self-Service Catalog Item: Standardized laptop configurations pre-linked to user roles. • Automated Routing Engine: Dynamic approval workflows dispatched based on manager hierarchy and expense thresholds. • API Vendor Dispatch: Instant generation of purchase orders directly to vendor systems upon approval. • Real-time Tracking: Automated notifications via Microsoft Teams and email at every stage.
3.	Novelty / Uniqueness	• Zero-Touch Processing: Standard laptop requests require zero human intervention from IT staff if within pre-approved budget rules. • Contextual Flow Logic: Dynamic branching that handles exception handling, stock re-routing, and back-order notifications seamlessly. • No-Code Maintainability: Uses Flow Designer's visual builder, allowing IT administrators to update approval policies without custom script maintenance.
4.	Social Impact / Customer Satisfaction	• Day-One Readiness: Guarantees new hires receive fully configured devices on their first day, boosting employee morale and onboarding experience. • Reduced Friction: Eliminates repetitive administrative follow-ups and transparently shows request status to end-users. • Workplace Efficiency: Frees IT personnel from manual ticket dispatching, allowing them to focus on high-value technical support.
5.	Business Model (Revenue Model)	• Internal ROI / Cost Reduction: Saves ~85% of staff processing time per procurement ticket (reducing turnaround time from 10 days to under 48 hours). • SaaS Integration Packaging: Can be packaged as a reusable ServiceNow Store Application / Integration Spoke for enterprise IT consulting engagements.
6.	Scalability of the Solution	• Cross-Department Expansion: The underlying Flow Designer architecture can easily expand to automate mobile devices, software licensing, and home office peripheral requests. • Enterprise Volume: Built natively on cloud infrastructure capable of processing thousands of concurrent procurement flows across global enterprise branches without performance degradation.
