

# Functional & Performance Testing Template

## Model Performance Test

|               |                                                                                   |
|---------------|-----------------------------------------------------------------------------------|
| Date          | 1 October 2026                                                                    |
| Team ID       | SWTID-2026-3408                                                                   |
| Project Name  | Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer |
| Maximum Marks |                                                                                   |

## Test Scenarios & Results

| Test Case ID | Scenario (What to test)                                                | Test Steps (How to test)                                              | Expected Result                                                                   | Actual Result | Pass/Fail |
|--------------|------------------------------------------------------------------------|-----------------------------------------------------------------------|-----------------------------------------------------------------------------------|---------------|-----------|
| FT-01        | Text Input Validation (e.g., justification, employee name, department) | Enter valid and invalid text in the catalog request form fields       | Valid inputs accepted, errors for invalid or empty mandatory inputs               |               |           |
| FT-02        | Number Input Validation (e.g., quantity of laptops)                    | Enter quantities within and outside the allowed range                 | Accepts valid quantities, shows error for out-of-range values                     |               |           |
| FT-03        | Automated Order Processing (standard laptop request)                   | Submit a complete standard laptop request from the Service Catalog    | Flow triggers, approval is handled, and the procurement task is created correctly |               |           |
| FT-04        | Flow Trigger and Connection Check                                      | Check that the flow is active and starts when a request is submitted  | Flow executes successfully without errors                                         |               |           |
| PT-01        | Response Time Test                                                     | Use a timer to check how long the flow takes to create the order task | Should be under 3 seconds                                                         |               |           |

| Test Case ID | Scenario (What to test) | Test Steps (How to test)                                     | Expected Result                       | Actual Result | Pass/Fail |
|--------------|-------------------------|--------------------------------------------------------------|---------------------------------------|---------------|-----------|
| PT-02        | Concurrent Request Test | Submit multiple laptop requests at the same time             | Flow should not slow down or fail     |               |           |
| PT-03        | Bulk Order Load Test    | Submit a large batch of laptop requests and check processing | Should work smoothly without crashing |               |           |
